RE: Match Word – Proposal Response & Budget Discussion

Hi Gregory,

Thank you so much for this – it is genuinely one of the most thorough and professional proposals I have ever seen. I can tell you read every word of that specification and I really appreciate that.

To answer your open questions:

1. Flutter + Supabase – yes, I am very happy with that stack. I actually already use Supabase on another project so I am familiar with it.
2. Guy Smiley voice – I love the idea of a mix of pre-recorded clips and ElevenLabs for dynamic announcements. Let's go with that.
3. Audio assets – please go ahead and source licensed audio for the theme music and announcer. I would like it to feel warm, fun, and classic game show in style.
4. Asset delivery – I plan to start working on the character art assets right away. I will have them ready before we reach those milestones.
5. Starting milestone – let's begin with Milestone 1 as planned.

Now I want to be completely honest with you, because that is how I work. Your proposal is excellent and your pricing is fair for the scope of work. However my budget for this project is \$6,000 CAD. I am \$2,100 short of your quote.

I am not asking you to do the same work for less – I respect your time and expertise too much for that. But I would love to have a conversation about where we might find some flexibility. Perhaps some milestones can be trimmed slightly, or we defer a feature to a Phase 2 once the game is generating subscription revenue.

I really want to build this with you. Can we find a way to make the numbers work?
